SUPERNOBA

ABOUT SUPERNOBA

Supernoba isn't just a pseudonym: it is where the experiences, memories and dreams of Javier (Jabi) converge, a multidisciplinary artist from the State of Mexico working at the intersection of literature, music and software development. He sums it up in three facets: *Jabi the one who thinks, noba the one who writes, and Supernoba the one who sings.*

Literature. It all began with his debut novel, *Brillo de una Estrella Muerta* (Shine of a Dead Star), which follows the life cycle of a star: Nebula, Red Giant, Supernoba and White Dwarf. He published it in December 2025 on his own web platform, and it is now available in print.

Music. It is the voice of his universe in real time. In 2026 he released his first singles, *Rulos* and *nohablobien / part3*; the latter is born straight from the third part of the book. Every song is a new star in the same sky.

Development. As a software engineer, he has complete control over the experience of his work: he programmed the Supernoba site himself, the digital ecosystem where his projects live. In the end, Supernoba is the explosion of everything he can do and think.
